

TESS I WIRELESS OPERATION INSTRUCTIONS

Two Speed Throttle Button:

Throttle Up - Push firmly down for 1 second and wait for the RPM of the engine to raise to the set position. After the main controller has received the signal the LED light on the main controller (in the cab) will go on.

Throttle Down - Push firmly down for 1 second and wait for the RPM of the engine to come down to idle. After the main controller has received the signal the LED light on the main controller (in the cab) will go out.

Start Button - Hold button down the engine will begin to crank and start. Release as soon as you hear the engine begin to start.

Stop Button - Hold button down and this will stop the engine from running. Release button as soon as the engine is stopped.

Emergency Power - Hold down the button, the emergency power motor will start to work while the button is being depressed.
